

Air Plants & Succulents

Tillandsia "Air Plants"

With almost endless mounting possibility this plant requires minimal care. Provide with a bright location, but avoid direct sunlight and mist daily!

Succulents

Booming in popularity, succulents are close to indestructible houseplants and come in several different varieties. These plants thrive in full sun or bright light and like to go dry between waterings. When the temperature is warm enough, move your succulents outdoors in a sunny to partly sunny location.
